PROFESSIONAL EXPERIENCE

Smarsh | Customer Data Services Team Lead | Feb 2021-Present

- Lead client-facing data services operations supporting organizations with complex regulatory, technical, and data-management requirements.
- Serve as a key point of communication between clients and internal teams, translating technical requirements, project status, risks, and next steps into clear, actionable information.
- Coordinate data migration and lifecycle projects involving multiple stakeholders, competing priorities, and strict data-handling requirements; migrations commonly involve 5-10 TB of client data.
- Manage client escalations by identifying underlying needs, coordinating internal resources, setting expectations, and driving issues toward resolution.
- Prioritize and assign work across the team based on customer needs, deadlines, complexity, and available resources.
- Lead, coach, and train team members; establish performance expectations, conduct reviews, and evaluate progress toward quarterly goals.
- Collaborate across geographically distributed teams in the United States, India, and Costa Rica.
- Use Salesforce, Jira, Microsoft CRM, and related platforms to manage client information, workflows, cases, and project activity.

Smarsh | Client Data Services / Data Operations | 2018-Feb 2021

- Supported customers through complex data migration, import/export, media cataloging, troubleshooting, and data lifecycle processes.
- Gathered requirements, explained technical processes, resolved issues, and maintained clear visibility into project status.
- Coordinated with technical and operational teams to ensure client requirements were understood and executed accurately.
- Built deep knowledge of company products, workflows, data processes, and regulatory considerations while developing a strong reputation for de-escalation and customer communication.

Microsoft | Product Adviser - Technology Sales | Portland, OR | Approx. 2.5 years

- Provided consultative technology sales and product guidance based on customer needs, goals, and use cases.
- Used discovery-based conversations to identify requirements and recommend appropriate Microsoft products and solutions.
- Explained technical products and features in accessible terms to customers with varying levels of technical knowledge.
- Built customer relationships while contributing to store sales and service objectives and maintaining current product knowledge.
